## **Replacement of Microwave Communications Link Grantley Adams International Airport/The Gunhill Main VHF Transmitter Site Barbados January 2011**

---

Aeronav is pleased to announce the award of a contract with The Grantley Adams International Airport Inc. to replace the Microwave Communications Link between Grantley Adams International Airport and Gunhill Signal Station in Barbados.

Works, which are due to be completed in August 2011, include the design, supply, installation and commissioning of a state of the art Microwave Radio Communications System with real time monitoring and remote control. The Radio System utilizes a redundant frequency hopping spread spectrum link providing our customer with a low setup and operating cost.

The inclusion of a real time Remote Control & Video Monitoring System allows for a reduced response and repair time for the Airports Maintenance Team.

Barbados as a premiere Air Navigation hub in the Caribbean will receive significant benefits in the upgrade to their communications network resulting from this project.

The Aeronav Group specializes in **Integrated Air Traffic Control (ATC) and ground-based Radio Navigation Aids (NavAids)** solutions. We provide system design, integration, installation, training, maintenance services and turnkey solutions for civil and military aviation organizations worldwide.

We provide technical and consulting services with expertise in the following areas:

- ▶ NavAids
- ▶ ATC System Integration
- ▶ Air Traffic Control Tower Systems
- ▶ Custom Mobile Systems
- ▶ ATC facility shelters and
- ▶ Design and Consulting Services
- ▶ Construction
- ▶ Energy Systems
- ▶ Runway Lighting Systems
- ▶ Integrated Air Traffic Management solutions
